experiment science

**June 5th, 2020 - every chemical reaction that exists**  
is one of two things endothermic or exothermic the  
greek root therm means temperature or heat which  
gives us a clue about all reactions there is energy  
exchange endo means within while exo means  
outside so these types of reactions are opposite  
endothermic reactions are those which absorb heat  
during the reaction "spectacular chemical
